A LEADING PROCESSOR OF SCRAP METAL
FROM SOURCE TO END USER.

Wye Valley Metals is a leading processor of scrap metals, sourcing metals UK wide from full factory clearance contracts, demolition projects and delivery to site from businesses and the general public. Our materials are processed on site and supplied directly to established home markets, niche foundries, multinational steelworks and direct export markets.

With 50 years' experience in the marketplace, the business is continually growing by investing in new opportunities and technologies allowing us to keep a competitive edge. Investments in infrastructure have included; a £1.5M 1000T processing shear and a haulage fleet, specified to the latest emissions standards, when used with our in-land dock facility, allows us to export globally, directly from our site.

We are one of the first dedicated recycling facilities in the UK to attain ISO: 9001, ISO: 14001 and BS OH SAS: 18001 International standards for all our activities. This includes waste management, hazardous waste handling, DVLA End-of-Life Vehicle destruction, skip hire, WEEE, scrap metal, waste carrying and all associated recycling operations. The facility is also one of the first recycling sites in the UK to gain an EA approved Fire Prevention Plan in response to the high profile national waste fire prevention programme.

We work with major utilities and transport operators such as Network Rail and National Grid coordinating UK wide contracts from our Hereford Head Office.
